# Yaacob Abdullah

New York, NY — yaacobabdullahh@gmail.com — linkedin.com/in/yaacobabdullah — github.com/veryno — yaacobabdullah.com

## EDUCATION

**CUNY Queens College** — **New York, NY**
*Bachelor of Arts in Computer Science* — September 2025

**Shanghai University** — **Shanghai, China**
*Chinese Language and Culture* — June 2025 – August 2025

**Relevant Courses:** Data Structures and Algorithms, Object-Oriented Programming, Internet and Web Technologies

## EXPERIENCE

**Vex Technologies Inc.** — **New York, NY**
*Founder & Software Engineer – (React Native, TypeScript, Swift, Supabase, Next.js)* — January 2026 – Present

- Built **Trace**, an iOS driving journal with **60 screens** in **65 locales**, by developing it in **React Native (Expo)** and strict **TypeScript** around a full-screen **Mapbox** map.
- Automated drive recording so trips start and save with **zero taps**, by writing **24K lines** of **Swift** native modules for background GPS and motion detection, plus **CarPlay**, Live Activities, and widgets.
- Kept drive recording working offline, verified by **4,000+ automated tests**, by designing a per-account **SQLite** journal that syncs via an outbox to **Supabase** with row-level security and **13 edge functions**.
- Published **147K+ traffic-camera records** in **749 regional packs**, by building a daily **GitHub Actions** pipeline that merges **OpenStreetMap** with public inventories, tests normalization, and verifies each release.
- Protected driver privacy on public road heatmaps with **5-driver k-anonymity**, by aggregating routes into **H3** hex cells in **PostgreSQL** and letting users hide up to **20 private zones**, such as home.

**Reem Construction Corporation** — **New York, NY**
*Software Engineer – (React, Node.js, Tailwind CSS, MongoDB)* — September 2024 – Present

- Delivered a web platform supporting 30+ active clients for multimillion-dollar development projects and collaborated with executives and PMs to align software design with company vision and values.
- Built client-facing applications in **React, Tailwind, and Radix UI**, connecting the frontend to a **MongoDB** database containing project catalogs.
- Owned the lifecycle of features from architecture to deployment, managing Turbify infrastructure and email authentication to support a stable production environment.

**Truebird** — **New York, NY**
*Software Engineer Intern – (Node-RED, JavaScript, SQLite, React, Node.js, XState, MQTT)* — May 2024 – August 2024

- Developed a business intelligence dashboard processing life-time historical transactions, enabling real-time tracking of customer activity and engagement.
- Utilized **Node-RED** and the **MQTT** protocol to construct dynamic charts, tables, and summaries, allowing upper management to view internal data through a clear and intuitive dashboard interface and improving operational insights.
- Engineered frontend animations and implemented backend APIs, using **React, Node.js, and XState**, filling team gaps and doubling deployment rate.

**Open Avenues** — **New York, NY**
*Software Engineer Intern – (QuickNode, Solidity, Node.js, Chainlink VRF, Chai, Hardhat)* — February 2024 – May 2024

- Spearheaded the development of a decentralized finance platform, utilizing **Solidity** smart contracts and **JavaScript** to enable secure, scalable, and high-performance blockchain transactions.
- Leveraged **Chainlink VRF** and the **SHA-256** hash to ensure random winner selection and data integrity, facilitate secure Ether transactions, and support commitment schemes.

**CUNY Tech Prep** — **New York, NY**
*Data Science Fellow* — August 2024 – May 2025

- Selected as one of **100 students from 600+ applicants** for a data science fellowship, collaborating with peers from 11 senior colleges to create technical projects using Python, Jupyter Notebook, Scikit-learn, Pandas, and NumPy.
- Developed and deployed **predictive ML models** while mastering exploratory data analysis, feature engineering, statistical modeling, and machine learning techniques.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Swift, HTML/CSS, Python, Java, C++, SQL, Solidity
**Frameworks and Libraries:** React, React Native, Expo, Next.js, Node.js, Express.js, Tailwind CSS, Scikit-learn
**Databases and Tools:** PostgreSQL, Supabase, MongoDB, SQLite, Git, GitHub Actions, Docker, Postman, Jupyter
